

Coll-egan®

P13772 | P14358 | P14359

Collagen is the structural protein found in skin, bones, and ligaments which has recently become hugely popular due to its association with healthy skin and joints. However, traditional collagen is not suitable for vegetarians or vegans.

Coll-egan® is a vegan product that contributes to normal collagen formation by closely replicating the composition of collagen.

Supported by EFSA health claims for collagen formation. Coll-egan® has been combined with vitamin C from acerola enabling access to authorised health claims relating to Collagen and its role in skin, gums, blood vessels, bones, cartilage and teeth.

**United
Kingdom**

Available as an unflavored blend, alongside off the shelf flavours with the opportunity to develop bespoke flavor blends.
